Stakeholder Map

CIT 140 Week 3 - Stakeholder Map · Revision 43

Proposed QA Control Review / participation and decision rights

PEOPLE	RELATIONSHIPS	NEXT CONVERSATIONS
Who is affected?	Who contributes and decides?	What needs confirmation?

1. People and roles

QA and night-shift operators

Nia represents QA and has explained why the night-shift operators need to be included in the review. These employees work directly with the equipment and could be affected by any changes that are made. They need an opportunity to explain their concerns, share their experiences, and provide feedback. Nia has influence because she can bring these concerns to the group, but she does not have final approval authority. We have heard Nia's perspective, but we still need to speak directly with the night-shift operators to understand their individual concerns. They may not have much authority over the final decision, but their input is important because they are the ones doing the work. (W03-S01)

Engineering

Elias represents Engineering and can provide technical knowledge about the robot and how it operates. He can help explain the technical issues, review possible solutions, and identify what information is needed before making any changes. Engineering needs accurate information about the problems and feedback from the employees who work with the equipment. Elias has influence because of his technical expertise, but that does not mean he has the authority to approve the project or its budget. His role is to provide recommendations and technical guidance, while the final approval must come from someone with the proper authority. (W03-S02)

Operations

Mara is the Production Operations Manager, and her role is to help coordinate the review and make sure everyone who needs to be involved has a chance to provide input. She needs a clear summary of everyone's concerns and recommendations so the project can move forward through the proper decision process. Mara can organize meetings, contact participants, and bring recommendations to the

authorizing sponsor. However, she cannot approve the project or its budget herself because she has not been identified as the person with that authority. Before moving forward, we need to confirm who has final approval and make sure the appropriate people have been consulted. (W03-S04)

Sponsor and record custodian

The authorizing sponsor is responsible for approving the proposed review through the organization's approval process. Operations sends recommendations to the sponsor, but the records do not identify who currently holds this position. We still need to confirm the person's name, approval limits, and whether they have officially authorized the project.

The record custodian is responsible for maintaining and managing the project's records. However, there is no named contact or confirmation that someone has accepted this responsibility. We need to identify who the custodian is and confirm their responsibilities. Just because this information is missing does not mean nobody has these responsibilities. Both roles need to be confirmed before moving forward. (W03-S03)

2. Relationships and next steps

Competing needs and tradeoff

Mara wants to have one daytime meeting to make things easier, but Nia wants the night-shift workers to be included. Both have reasonable concerns because the meeting needs to be organized, but everyone affected should have a chance to share their opinions. I think they could have a daytime meeting and a separate meeting with the night shift, or allow them to provide feedback another way. This would make sure both groups are heard without assuming everyone has agreed. (W03-S01, W03-S04)

Consultation plan

I would start by meeting with Nia and the QA operators to understand their concerns and how the review affects their work. I would also speak with Elias from Engineering to get his technical input and Mara from Operations to understand what decisions need to be made. These conversations should happen before gathering detailed requirements. I would use short interviews and meetings scheduled around each person's availability, including the night shift. I would also confirm who the record custodian and authorizing sponsor are and contact them about their responsibilities and approval limits. Even if someone doesn't have the authority to make decisions, their experience is still important because they may be directly affected by the outcome. (W03-S01, W03-S04)

Missing voices and validation

Two things we still need to confirm are who will represent the night-shift operators and who has the authority to approve the project. Nia has requested night-shift participation, but we have not heard directly from those employees. We also need to identify the person responsible for maintaining the records and confirm who can approve the budget. Mara should help contact the appropriate people, and I would

> document their responses in the stakeholder map, including their names, roles, and whether they agreed to participate. Just because someone has not responded does not mean they agree or that their input is not needed. (W03-S02, W03-S03, W03-S04)

> **Next step toward requirements**
>
> Before moving on to the detailed requirements interviews, we need to confirm who will be participating and who has the authority to approve the project. We also need to identify the record custodian and make sure the night-shift operators have an opportunity to share their concerns. The stakeholder map helps us identify who is involved, what their responsibilities are, and what information they can provide. Mara can use this information to contact the right people and organize the interviews. Completing the map does not mean the project has been approved. It just helps us prepare for the next steps and make sure we are including everyone who needs to be involved. (W03-S03, W03-S04)

3. Book evidence connection

> **Book form connection**
>
> The tools and questions helped me improve my consultation plan by making sure everyone has a chance to share their concerns. I think using questionnaires would be especially helpful for the night-shift operators who may not be able to attend daytime meetings. This would allow me to hear their opinions along with Nia, Elias, and Mara before moving forward with the project.
