CIT 140 — Week 3 Book Evidence

Section Seven: Designing Your TnT Environment | Prompts 32 and 33

Prompt 32 — Tools and templates for stakeholder consultation

Five tools I would use to help stakeholders participate and make decisions are:

1. Stakeholder map: Identifies the people involved, their roles, and who needs to be consulted before changes are made.

2. Questionnaire or survey: Gives employees, including people working the night shift, a way to share concerns when they cannot attend a meeting.

3. Meeting agenda and notes template: Keeps discussions focused and records questions, decisions, and follow-up items.

4. Responsibility chart: Clarifies who provides input, who carries out tasks, and who has final approval.

5. Feedback and issue log: Collects concerns, tracks unresolved problems, and shows stakeholders what happened after they raised an issue.

Prompt 33 — Three identity-building questions

These questions would help stakeholders describe the experience and responsibilities they bring to the project:

1. What part of your job or experience gives you a perspective that others on this project might not have?

2. What do you feel most responsible for protecting or improving when we make changes to this process?

3. When this project is successful, what would you want your team to be known for contributing?

Prepared from the Week 3 assignment description and stakeholder consultation exercise. The wording of the textbook prompts on page 72 was not independently verified.
