CIT 140 · Week 4 · Cedar Junction

Validated Requirements Set

Kristen Ramirez · Revision 56

R-01 · functional

Requirement: The system must display separate appointment statuses for a scheduling slot awaiting final confirmation, a visitor who has arrived but cannot proceed, and an appointment ready for intake.

Source: W04-S01 · Dana Ruiz

Rationale: Scheduling and Intake currently use the same held status for different situations. This causes confusion and delays when visitors arrive.

Acceptance check: Given appointments in each of the three conditions, when intake staff view the records, then each appointment must display its correct and distinct status.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: The system must clearly separate held from ready. Held means the appointment is waiting for confirmation or the visitor cannot move forward. Ready means all necessary conditions have been met. Staff must be able to see which condition applies and what action is needed.

R-02 · user

Requirement: Authorized intake staff must be able to see the reason for an appointment status exception, who last changed the status, and the next approved action.

Source: W04-S01 · Dana Ruiz

Rationale: Staff need this information to resolve appointment problems without calling multiple departments while visitors wait.

Acceptance check: Given an appointment with a status exception, when an authorized intake employee opens the record, then the employee must be able to identify the reason, the person who changed it, and the next approved step.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: The system must clearly separate held from ready. Held means the appointment is waiting for confirmation or the visitor cannot move forward. Ready means all necessary conditions have been met. Staff must be able to see which condition applies and what action is needed.

R-03 · business

Requirement: The system must allow a same-day appointment to be offered only when both a room and a qualified clinician are available.

Source: W04-S02 · Dr. Lena Okafor

Rationale: An open calendar slot does not guarantee clinical readiness. Confirming both resources prevents appointments from being offered when the clinic cannot accommodate them.

Acceptance check: Given a same-day appointment request, when either a room or qualified clinician is unavailable, then the system must prevent the slot from being offered.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: A confirmed appointment does not automatically mean it is ready. A same-day appointment can only be marked ready when both a room and a qualified clinician are available. If readiness changes, affected staff and the visitor must receive an updated status.

R-04 · functional

Requirement: The system must update appointment readiness when clinical availability changes and provide affected staff and visitors with the information needed to take the next step.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Readiness can change after confirmation. Staff and visitors need accurate updates without exposing unnecessary clinical information.

Acceptance check: Given a confirmed appointment, when clinical readiness changes, then the system must update the appointment status and provide the affected staff and visitor with an appropriate notification without revealing clinical details.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: A confirmed appointment does not automatically mean it is ready. A same-day appointment can only be marked ready when both a room and a qualified clinician are available. If readiness changes, affected staff and the visitor must receive an updated status.

R-05 · user

Requirement: The system must allow authorized staff to view a visitor's approved language, communication preferences, and support needs throughout appointment confirmation, rescheduling, and check-in.

Source: W04-S03 · Priya Shah

Rationale: Visitors should not have to repeat their support needs every time they interact with a different department.

Acceptance check: Given an appointment with approved communication preferences, when the appointment is confirmed, rescheduled, or checked in, then authorized staff must be able to view those preferences.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Approved communication preferences, language needs, and support arrangements must stay with the appointment through confirmation, rescheduling, and check-in. Authorized staff must be able to see these needs so visitors do not have to repeat their requests.

R-06 · constraint

Requirement: The system must provide a phone or staff-assisted option for visitors who cannot use the online portal.

Source: W04-S03 · Priya Shah

Rationale: Visitors should have equal access to appointment services even if they cannot use the online portal.

Acceptance check: Given a visitor who cannot use the portal, when they request an appointment or need to make a change, then staff must be able to complete the process through an alternative method.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Approved communication preferences, language needs, and support arrangements must stay with the appointment through confirmation, rescheduling, and check-in. Authorized staff must be able to see these needs so visitors do not have to repeat their requests.

R-07 · nonfunctional

Requirement: The system must show only the minimum appointment status information needed on shared displays and restrict detailed information based on staff roles and authorized access.

Source: W04-S04 · Jordan Kim

Rationale: This protects visitor privacy while allowing staff to see the information they need to do their jobs.

Acceptance check: Given a shared display, when appointment information appears, then only the minimum necessary status is visible. Detailed information must be accessible only to authorized staff.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays must show only the minimum information needed by staff. Detailed information must be limited to authorized roles. The system must also keep a history of status changes, including who made the change, the previous status, the new status, and the time.

R-08 · functional

Requirement: The system must record who changed an appointment status, the previous status, the new status, and the date and time of the change.

Source: W04-S04 · Jordan Kim

Rationale: Keeping a history of changes allows staff to investigate errors, resolve problems, and identify who made each update.

Acceptance check: Given an appointment status change, when an authorized staff member reviews the history, then the system must display who made the change, the previous status, the new status, and the date and time.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays must show only the minimum information needed by staff. Detailed information must be limited to authorized roles. The system must also keep a history of status changes, including who made the change, the previous status, the new status, and the time.

Professional Guidance Assessment

IIBA: IIBA is a professional association that provides guidance and best practices for business analysis. It helps analysts understand stakeholder needs and develop clear requirements.

ISO/IEC/IEEE 29148: Together, they publish ISO/IEC/IEEE 29148, which provides standards for writing and managing requirements. It helps make requirements clear, consistent, traceable, and testable.

PMI: PMI focuses on project management and making sure projects are completed successfully. Week 4 focuses more on gathering, writing, and validating requirements, so IIBA and ISO/IEC/IEEE 29148 are more directly related.

Application: The guidance helped me make R-03 more clear and testable. Instead of just saying an appointment must be ready, I specified that both a room and a qualified clinician must be available before a same-day appointment can be offered.

Prepared in Command Nexus. Canvas remains the official submission point.
